Aim:- Implementation of Knowledge representation Schemes - use cases.

Initial State

? (Make a guess)

Final State

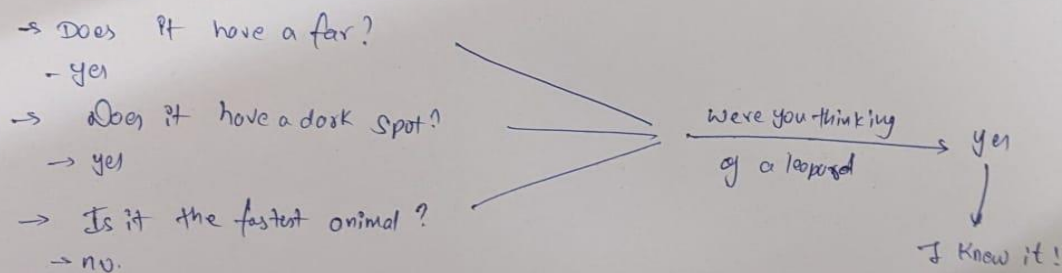

yes or
learn a new concept

Problem Formulation

Given Some Classification rule and some predefined clauses, given an animal and let your machine predict it, if the machine is unable to predict the animal, it will ask the answer and store it in its knowledge base.

Problem Solving

Imagine on Animal (You are only allowed to answer yes or no for the next set of question)

ALGORITHM:-

Step 1: Start

Step 2: The user is expected to think of a animal and answer to the questions shown in the prompt.

Step 3: The user answers the set of questions and the inference rule is drawn from it.

Step 4: IF a conclusion to the premises result true it would display the name of the animal otherwise the machine learns from the given set of input.

Step 5: Repeat step 2 to 4 if the user want to make the guess again otherwise go to step 6.

Step 6: Stop

Identification of animal:

cheetah :- mammal,

carnivore,

verify(has_tawny_color),

verify(has_dark_spots).

tiger :- mammal,

carnivore,

verify(has_tawny_color),

verify(has_black_stripes).

giraffe :- ungulate,

verify(has_long_neck),

verify(has_long_legs).

zebra :- ungulate,

verify(has_black_stripes).

Classification rules:

mammal :- verify(has_hair), !.

mammal :- verify(gives_milk).

bird :- verify(has_feathers), !.

bird :- verify(flys),

verify(lays_eggs).

```
carnivore :- verify(eats_meat), !.  
carnivore :- verify(has_pointed_teeth),  
verify(has_claws),  
verify(has_forward_eyes).  
ungulate :- mammal,  
verify(has_hooves), !.  
ungulate :- mammal,  
verify(chews_cud).
```

SOURCE CODE:-

```
import sys
```

```

OUTPUT:-

```
RA1911003010640/AI_9.py × RA1911003010640/AI_8.py +
[Stop] [Refresh] Command: RA1911003010640/AI_8.py
yes
Is it the fastest animal?
no
Were you thinking about a leopard?
yes

I knew it!

Do you want to play again?
█
```

RESULT:-

Hence, the Implementation of rule based inference system is done successfully.
